

Thank-you for choosing your turf from Field (compost) Ltd. Because it is important to look after a newly laid lawn, we have set out below a few useful bullet points which will help ensure your lawn has the best possible start.

Watering: Very important!

- Try to be fully equipped with a hose and a sprinkler before your turf is laid;
- When temperatures drop below 10^oc watering is not so important but look for signs of the turf looking dry and water as required;
- In warm weather, ensure you start watering as soon as the turf is laid;
- Quantities of water will vary with soil types and temperature;
- Lift 1 corner of a turf to ensure the turf is moist all the way through and the soil underneath is also moist;
- If possible, water twice a day, early morning and late afternoon for 2 weeks;
- Make sure you have covered every turf. The water will not spread;
- Do NOT walk on the turf after you have watered it.

Stay off the turf for 2 weeks or longer if it's laid on a steep gradient.

Mowing:

- Start mowing your lawn approximately 2 weeks after laying;
- Use the mower on a high setting to start and then mow again a few days later to reduce the height;
- Repeat mowing once a week from Spring to Autumn;
- Never mow any more than 1/3 of the sward length in one cut;
- Use a mower with a grass collector! Raking cuttings may damage the grass.
